Supported Brands

ERS supports multiple Volvo Group truck brands. Vehicle availability, business rules and supported functionality may vary between brands. ERS documentation is structured to highlight shared functionality while allowing brand-specific differences where required. 【1-7683b4】

Brand Landscape

Brand Landscape

Brand	ERS Vehicle Group	Notes
Volvo Trucks	HDV, MDV	Native Volvo offerings supported in ERS, includes E-Tech electric vehicle offering
Renault Trucks	HDV, MDV, LCV	Includes E-Tech electric vehicle offerings
Mack	MDV	In ERS, Mack vehicles are currently handled through the MDV configuration model and driveline setup
VTNA	MDV	In ERS, VTNA vehicles are currently handled through the MDV configuration model and driveline setup

Volvo Trucks

 Volvo Trucks is one of the primary brands supported by ERS.

ERS supports Volvo electric vehicle offerings and simulation scenarios related to route planning, charging and energy consumption estimation. Brand-specific offerings and vehicle availability may evolve over time.

Typical ERS Areas

- Vehicle Configuration
- Route Planning
- Charging
- Simulation
- Reporting

Renault Trucks

 Renault Trucks is supported by ERS and participates in ongoing electrification initiatives within Volvo Group.

ERS supports Renault electric vehicle offerings and associated business scenarios. Renault Trucks materials highlight electric truck offerings and continued development of battery electric solutions.

Typical ERS Areas

- Vehicle Configuration
 - Route Planning
 - Charging
 - Simulation
 - Reporting
-

Mack

Mack is a Volvo Group brand focused primarily on the North American market.

ERS supports Mack-related vehicle simulations and future electrification offerings.

Typical ERS Areas

- Vehicle Configuration
 - Route Planning
 - Charging
 - Simulation
 - Reporting
-

VTNA

Volvo Trucks North America (VTNA) represents Volvo truck operations in North America.

ERS supports VTNA-specific offerings and use cases where applicable.

Typical ERS Areas

- Vehicle Configuration
- Route Planning
- Charging
- Simulation
- Reporting

Brand-Specific Documentation

Brand-specific rules documented under:

Business Rules

└ Brand Specific Rules

Feature-specific differences documented directly within the relevant functional documentation pages.

Examples:

Functional Documentation

└ Vehicles

└ Charging

└ Route Planning

└ Reports

Common ERS Principles

The following principles apply across supported brands:

- ✓ Vehicle-based simulation
- ✓ Route-based energy estimation
- ✓ Charging planning
- ✓ Result analysis and reporting
- ✓ Integration with shared ERS platform capabilities (for now only VTE and RT are integrated with Energy API)

Important

Vehicle classification within ERS may differ from real-world product categorization.

ERS documentation describes vehicle groups according to ERS implementation and configuration logic.
