Supported Vehicle Types

ERS supports multiple electric vehicle groups. The available vehicle types depend on brand, offering and ERS implementation.

Quick Navigation

 HDV	 MDV	 LCV	 Brand Mapping
---	---	---	---

Vehicle Landscape

Vehicle Group	Description	Brands
HDV	Heavy Duty Vehicles	Volvo Trucks, Renault Trucks
MDV	Medium Duty Vehicles	Volvo Trucks, Renault Trucks, Mack, VTNA
LCV	Light Commercial Vehicles	Renault Trucks

HDV

Heavy Duty Vehicles

HDV represents heavy-duty truck configurations used for long-distance and demanding transport operations.

Typical use cases:

- Long haul transportation
- Regional haul
- Construction applications
- Heavy logistics operations

Typical ERS capabilities:

- ✓ Route simulation
- ✓ Charging planning
- ✓ Vehicle configuration

✓ Energy consumption estimation

MDV

Medium Duty Vehicles

MDV represents medium-duty vehicle configurations used within ERS.

Typical use cases:

- Urban distribution
 - City logistics
 - Regional deliveries
-

Important ERS Implementation Note

Some vehicles may be marketed as heavy-duty trucks outside ERS but are represented using the MDV model inside ERS.

This currently applies to:

Brand	ERS Vehicle Group
Mack	MDV
VTNA	MDV

For these brands ERS currently uses:

- MDV configuration model
- MDV driveline logic
- MDV eligibility rules
- MDV simulation setup

This is an implementation decision within ERS and does not necessarily reflect real-world vehicle classification.

LCV

Light Commercial Vehicles

LCV represents light commercial vehicle offerings available in ERS.

Typical use cases:

- Urban deliveries
- Last mile transport
- Light commercial operations

Current LCV support is primarily associated with Renault Trucks offerings.

Brand Mapping

How brands are represented in ERS

Brand	HDV	MDV	LCV
Volvo Trucks	✓	✓	✗
Renault Trucks	✓	✓	✓
Mack	✗	✓	✗
VTNA	✗	✓	✗

Vehicle Selection in ERS

Vehicle selection typically starts with:

Additional vehicle capabilities, charging options and eligibility rules depend on the selected configuration.
